

CURRICULUM VITAE

FOR

MATTEO ALVARO

(Last update February 2016)

I. PERSONAL DETAILS AND CONTACTS

Date of birth: December 3rd 1982
City of birth: Milan (Italy)
Nationality: Italian
E-mail: matteo.alvaro@gmail.com; matteo.alvaro@unipd.it; matteo.alvaro@unipv.it
Current Employee: Department of Earth and Environmental Sciences- University of Pavia, Via Ferrata, 1. Pavia, Italy.
Last Employee: Geosciences Department - University of Padua, Via Gradenigo, Padova, Italy.
Present address: Via Marconi, 117, Giussago (PV), 27010, Italy
Land phone: (+39) 0382927559 (home), (+39) 0382985881 (office)
Mobile: (+39) 3389133923
IM contact: Teins..(skype)
ORCID: <http://orcid.org/0000-0002-6975-3241>,
Scopus ID: 24173188200
ResearcherID B-8451-2013
Google Scholar <http://scholar.google.com/citations?user=yfF0H4oAAAAJ&hl=en>

II. ACADEMIC RECORD AND CAREER

- February 2016 - present** *Research Scientist:*
Research topic: Elastic geobarometer for UHP metamorphic rocks.
Grant: SIR-MIUR (MILE DEEp, RBSI140351, 449.900€)
Place: University of Pavia, Italy
- February 2015 – February 2016** *Postdoctoral fellow:*
Research topic: Elastic geobarometer for UHP metamorphic rocks.
Grant: Fellowship from Univeristy of Pavia
Place: University of Pavia, Italy
- April 2013 – January 2015** *Postdoctoral Associate:*
Research topic: Thermoelastic behavior of mineral inclusions in diamonds.
Grant: ERC – INDIMEDEA (#307322)
Place: University of Padua, Italy
Advisor: F. Nestola
- April 2012 –April 2013** *Postdoctoral Associate:*
Research topic: Comparison between Martian meteorites and their terrestrial analogues for MARS-XRD experiment.
Grant: Italian Space Agency grant (n. I/060/10/0) for the MARS-XRD/ExoMars project
Place: Università G. D’Annunzio (Chieti-Pescara)
Advisor: L. Marinangeli
- 2010 – 2011:** *Postdoctoral Associate:*
Research topic: Framework minerals at non ambient conditions.
Grant: NSF - EAR 0738692
Place: Virginia Tech Polytechnic Institute and State University.
Advisor: Ross J. Angel
- 2006 – 2009:** *Ph. D. Research:*
 The $P2_1/c - C2/c$ phase transition of pigeonite.
Place: Department of Earth Sciences, University of Pavia, Italy.
Advisor: Prof.ssa M.C. Domeneghetti
- 2006:** *Master degree – Geology (110/110 cum laude)*
Dissertation: Investigation on the Fe^{2+} - Mg exchange reaction kinetic for PCA 82506 ureilitic meteorite.
Place: Department of Earth Sciences, University of Pavia, Italy.
Advisor: Prof.ssa M.C. Domeneghetti
- 2004:** *Bachelor degree – Geology (110/110 cum laude)*
Dissertation: Study of chondritic meteorite Trenzano.
Place: Department of Earth Sciences, University of Pavia, Italy.
Advisor: Prof.ssa M.C. Domeneghetti
- 2001:** *High school degree (68/100)*
 Liceo scientifico tecnologico
Place: I.T.I.S. - G. Cardano Pavia, Italy

III. SCIENTIFIC ACTIVITY

A. MAIN RESEARCH TOPICS

My research is mainly focused to the determination of the chemical and physical properties of minerals phases relevant for the Earth and planetary sciences, together with the development of the mineralogical-crystallographic-elastic tools for understanding the behavior such phases under non ambient conditions. The properties of these mineral phases that represent the deep regions of our planet, meteorites from planetary bodies or technological materials provide fundamental information on planet-scale geological processes (such as convection, plate tectonics and subduction), and technological processes optimization. Moreover, my latest results are focused on the development of linear and non-linear elasticity theory applied to two components systems (*i.e.* host-inclusion). The development of my research is supported by experimental and theoretical interests that includes the following main topics:

- **High pressure** study of crystalline material by means of single-crystal X-ray diffraction using DAC (Diamond Anvil Cell) apparatus mounted on point detector and area detector diffractometers (*i.e.* Oxford diffraction – Agilent, Bruker and Huber systems). In particular these experiments have a wide variety of applications from Earth’s mantle elastic response (e.g. publications 2, 4, 9, 11 etc..) to industrial/commercial (*i.e.* ceramic industry, gemstone industry etc...) development and applications (e.g. publications 6, 8, 10, 17).
- **High temperature** study of crystalline material *in situ* by single-crystal X-ray diffraction using micro-furnace mounted on conventional diffractometer (*i.e.* Philips and Bruker systems). In particular those experiments have a wide variety of applications from Earth’s mantle elastic response (e.g. publication 3, 21) and the planetary bodies spectral analysis (e.g. publication 15) to industrial/commercial (*i.e.* ceramic industry, gemstone industry etc...) development and application (e.g. publications 3, 14, 16). Recently, I have been developing a new apparatus for high-temperature measurements. The considerably improved performances with respect to its predecessors allows determining lattice thermal expansion on single-crystals by means of X-ray diffraction up to 1200K with much higher precision and accuracy than before, using the same methods adopted for high-pressure measurements (e.g. 8-position centring).
- **Kinetic and equilibrium** study of crystalline material at high temperature conditions *ex situ* by single-crystal X-ray diffraction (*i.e.* Philips and Bruker systems) and using oven for the annealing experiments. In particular, these experiment are relevant for planetary and Earth’s processes studies such as cooling rate and history of terrestrial and extraterrestrial rocks (e.g. publications 1, 5, 12, 23).

- **Low temperature** study of crystalline material *in situ* by single crystal X-ray diffraction (i.e. using cryojet system mounted on area detector diffractometer). In particular these studies are devoted to the investigation of crystalline materials with ferroelectric and magneto-electric properties (e.g. publication 7). Few more applications recently on development regards the analysis of spectroscopic data at low temperature in order to apply the results to the shadow zones on planetary bodies.
- **Elasticity:** All the experimental methods above mentioned are fundamental tools for the characterization of any crystalline material under non-ambient conditions. Analysis of these experimental results requires knowledge of linear and non-linear elasticity. To this aim most of my latest research had been devoted to further extend and simplify elasticity theories to be applied to crystalline material (e.g. publications 18, 21). The recently developed EoSFit7c program allows users with basic knowledge on elasticity to expand their capabilities for data analysis including linear and non-linear elasticity in a simple manner.
- **Host-inclusion systems:** Expanding the limits for linear and non-linear elasticity intrinsically means dealing with more complex system such as “host-inclusion system” where the elastic response of the single phase component needs to be combined to allow the evaluation of the elastic response of the multicomponent system (e.g. publication 19, 22, 26, 27). Such multicomponent systems are among the most common cases on several disciplines going from earth sciences to material sciences (i.e. from mantle minerals to cements). Within the framework of the recently developed EoSFit7c program (publication 18) the “isomeke tool” has been developed and is still currently under development. Such tool will allow to retrieve the entrapment pressure by means of linear and non-linear elasticity of two isotropic spherical components (host-inclusion) system also accounting for elastic relaxation effects. Furthermore, current development is aimed to expand to program capabilities to handle anisotropic and non-spherical inclusion-host systems.

B. RESEARCH FUNDING

- **2015-2018** *MIUR-SIR: MILE DEEP*, Mineral Inclusion Elasticity for a new deep subduction geobarometer, 2015-2018 (RBSI140351, PI) 449.900 €

C. FUNDED RESEARCH PROPOSAL AT LARGE SCALE FACILITIES

- Beamtime at Swiss Light Source (SLS), beamline TOMCAT experiment number e15427 (The effect of cracking systems on diamond-inclusion geobarometry)
- Beamtime at Diamond Light Source (DLS) beamline I15 experiment number EE7616 (Chromite inclusion in natural diamonds: a picture of deep earth)
- Beamtime at Diamond Light Source (DLS) beamline I15 experiment number EE8754 (Diopsides in diamonds: new geobarometric approaches)

D. BIBLIOMETRIC RECORDS

- 31 Research publications in ISI journals
- More than 70 scientific communications to national and international conferences
- More than 200 citations in the past 5 years
- H index = 7

E. PUBLICATIONS (PEER-REVIEWED JOURNALS)

72. P. Nimis, **M. Alvaro**, F. Nestola, R.J. Angel, K. Marquardt, G. Rustioni, J.W. Harris. Hydrous Silicic Fluid Films around Solid Inclusions in Gem-Quality Diamonds. International Geological Conference 2016

I. ORGANIZATION OF MEETINGS CONFERENCES, SEMINARS AND WORKSHOPS

1. International Diamond School "The nature of diamonds and their use in Earth's study". Bressanone-Brixen, 27-31st January 2015. (http://www.indimedea.eu/diamond_school_2015.htm)
2. European Geoscience Union 2015. Co-convener for the sessions:
 - a. GMPV3.2 - High-pressure and high-temperature mineral physics: a link between petrology, geophysics and geodynamics.
 - b. GMPV4.2 - Inclusion-host systems: melt, fluid and solid inclusions and their importance in Earth Sciences
3. Elasticity course, within the framework of the PhD programme of the University of Pavia (3 CFU).
4. EosFit Workshop at 29th European Crystallographic Meeting (ECM-2015) in Rovinj, Croatia.
5. European Mineralogical Conference 2016, Rimini:
 - a. Sponsorship organization
 - b. Convener for session P13 "Inclusions in minerals as record of geological processes: new analysis methods and application"
 - c. Workshop: "Inclusions in minerals as record of geological processes: New analysis methods and application"

IV. TEACHING ACTIVITIES

- **2006-2007, 2007-2008, 2008-2009, 2012-2013**. Tutoring for Mineralogy and Laboratory course for students of first and second year of the degree in Geological Sciences at the University of Pavia (Italy).
- **2015-2016**. Lecturer for "analytical methodologies" (M.Sc., 3 CFU)

V. SUPERVISING ACTIVITIES

• Bachelor degree students

2012-2013	Davide Comboni	New thermoelastic parameters, thermal expansion behaviour and dehydration of cancrinite. <i>July 2013</i>
2012-2013	Mattia Luca Mazzucchelli	Diamond inclusions: new thermoelastic parameters for pyrope. <i>July 2013</i>
2013-2014	Mara Murri	Critical reassessment of the thermoelastic properties for diamond. <i>July 2014</i>
2013-2014	Greta Rustioni	The role of fractures on the entrapment pressure for diamond-inclusion pair. <i>September 2014</i>
2013-2014	Gabriele Zaffiro	Development of a new resistance furnace for in situ high temperature single-crystal X-Ray diffraction. <i>January 2015</i>
2014-2015	Matteo Di Prima	Almandine garnet at high-temperature: the role of controlled oxygen fugacity. <i>July 2015</i>

• Master degree students

2013-2014	Mattia Luca Mazzucchelli	Pressure of formation determination for host-inclusion systems. <i>July 2015</i>
2014-2016	Mara Murri	Geothermometer calibration for augites.
2014-2016	Greta Rustioni	Brittle deformation in minerals.

• Doctoral degree students

2013-2016	Lorenzo Scandolo	Thermal expansion of mantle minerals inclusions in diamonds
2015-2018	Mattia L. Mazzucchelli	Finite Element Modelling (FEM) of elastic anisotropy for host inclusion systems.
